

ABSTRACT:

A mobile, steer able excavating machine primarily used for the digging of graves, in which vertical cutting bar assemblies are mounted to a horizontal frame to allow digging of the soil downwardly and laterally with the frame of the machine while removing the soil from the hole on one side or the other into a haul able device, in addition all four wheels of the horizontal frame are powered by a hydraulic motor mounted in each of the hubs which allows for the apparatus to be steer able and mounted on the frame with a hydraulic cylinder used for leveling.
